

Source Not Found Error After Updating

Article Number: 200 | Rating: Unrated | Last Updated: Thu, Mar 12, 2015 at 9:49 AM

After applying a product update, when you launch the software you may see the following error: "The source was not found, but some or all event logs could not be searched..." This error occurs if you do not have permissions to write events to the event log. During the update, the software puts an entry in the event log. Click OK to the error. The software will function normally and your update has been applied.
